

## CLAIMS:

1. A kit for intravesicular instillation comprising, a first container containing a unit dose of a therapeutic compound selected from the group resiniferatoxin, tinyatoxin, 20-homovanillyl-mezerein or 20-homovanillyl-12-deoxyphorbol-13-phenylacetate in a solution concentrate or dry powder form and a second container containing a physiologically compatible diluent capable of dissolving and maintaining in solution the therapeutic compound, the volume of said diluent being sufficient for intravesicular instillation of the unit dose and providing a concentration of the therapeutic compound of from 0.05  $\mu\text{M}$  to 2.0  $\mu\text{M}$  upon mixing the diluent with the therapeutic compound, and means for combining the diluent with the stock solution or lyophilized powder under sterile conditions.
2. The kit of claim 1 wherein the first container contains a solution of resiniferatoxin dissolved in ethanol at a concentration of from 0.5  $\mu\text{M}$  to 20  $\mu\text{M}$  and the second container contains 100 ml of normal saline.
3. The kit of claim 1 wherein the first container contains a lyophilized power comprising from 0.005  $\mu\text{mole}$  to 0.2  $\mu\text{mole}$  resiniferatoxin and the second container contains 100 ml of 10%(v/v) ethanol in normal saline.
4. The kit of claim 1 further comprising means for transferring an instillation dose of the therapeutic compound to a patient.
